Preface

The *Higher School Certificate Examination Statistics* report has been published annually since 1985 by the Board of Studies and its predecessors. Each volume provides a statistical view of the candidature, the courses and the scaling of marks for a particular year while also serving as a public record of the Higher School Certificate Examination. The statistical tables can provide a valuable resource for teachers and researchers, with comparisons able to be made both within a single year and over an extended period of time.

In previous years the report has been provided to schools, universities and other interested parties. As of 1999, the report has only been published on the Board's web site at:

http://www.boardofstudies.nsw.edu.au/docs_stats/hscstats_page1.html.

Back copies of previous volumes may also be available.

Higher School Certificate Pathways

The Higher School Certificate program has traditionally been school based with most courses being of two years duration. Students studied these courses in Years 11 and 12 only, while students wishing to repeat had to repeat the whole of Year 11 and/or 12.

The HSC Pathways provisions have been available since 1995 and significant numbers of students have made use of them to provide greater flexibility in completing the required program of studies for the award of the HSC. Under Pathways, courses have been restructured into one-year components, Preliminary and HSC courses, with completion of a Preliminary course being a prerequisite for the corresponding HSC course.

The Pathways provisions include:

- *accelerating* - students may complete and be examined in one or more HSC courses ahead of their cohort;
- *accumulating* - students may complete HSC requirements over up to five years and be examined in each course in the year in which it is completed;
- *repeating* - students may repeat individual courses and have their Universities Admissions Index (UAI) recalculated by including the most recent attempt;
- *topping up* - students may attempt further courses after being awarded the HSC and have their UAI recalculated with the additions being available for inclusion in the best ten units.

All candidates who were examined in each course are included in the reported statistics and in the scaling of each course.

The 2000 Higher School Certificate Examination

In 2000 a Higher School Certificate was awarded to school and College of TAFE students who completed a satisfactory program of Preliminary and HSC courses, based on a public examination and, in most cases, a school assessment.

Each year tens of thousands of students sit for the Higher School Certificate Examination. In total they produce hundreds of thousands of pages of written scripts. In 2000, 62415 candidates presented for the Higher School Certificate with examinations being available in 144 courses, drawn from 75 subject areas. 46.8% of candidates were male and 53.2% were female. Most students presented five or six *Board Developed* courses, with each course involving at least one paper, usually of 3 hours' duration. Students may also present *Board Endorsed* courses. These are examined internally by schools and are not subject to scaling or moderation. Board Endorsed courses are not included in this report.

Candidates who meet all the Board's requirements for the full program of study are awarded the Higher School Certificate. Table 1 shows the total candidature cross-tabulated by award and sex.

Higher School Certificate Examination 2000

Table 1 - Total Candidature by Award and Sex

Category	Number of Candidates	Percentage of Candidature	Number of Males	Number of Females	Male Percentage	Female Percentage
Higher School Certificate	58212	93.3%	27028	31184	46.4%	53.6%
Result Notice	27	0.0%	12	15	44.4%	55.6%

No Award	231	0.4%	118	113	51.1%	48.9%
TOTAL	62415	100.0%	29181	33234	46.8%	53.2%

Reporting Results to Candidates

Before 1986 the Board of Senior School Studies applied iterative scaling procedures across different subjects to produce scaled examination marks for each course. These were combined with adjusted school estimates to arrive at scaled course marks. An aggregate mark was derived from these scaled course marks and was used as a basis for selecting students for entry to tertiary institutions and for some areas of employment. These procedures were discontinued by the Board in 1986. Since then, an aggregate mark has been calculated by the University of Sydney.

Since 1986 students have received two separate marks for each course:

- a *Scaled Examination Mark*
- a *Moderated Assessment Mark*

except in subjects taken outside the school, for which only the Scaled Examination Mark is available.

Since 1988 students have also received a *Percentile Band* for each course.

In 1988 and 1989 students received a *Tertiary Entrance Score*. This index, which was printed on the Higher School Certificate, was used as the basis for selecting students for tertiary courses.

From 1990 to 1997 an index called the *Tertiary Entrance Rank* was calculated.

From 1998 an index called the *Universities Admissions Index* has been calculated. This figure is not reported on the Higher School Certificate. It is provided, however, to students at the same time as their certificate.

From 1991, the Higher School Certificate has been issued as a *testamur*, with the results being reported separately on a Record of Achievement.

The Universities Admissions Index

The *Universities Admissions Index* (UAI) replaced the Tertiary Entrance Rank (TER) from 1998. The TER was a figure between 0 and 100 that was expressed in steps of 0.05 with the top students receiving 100. It was in effect the cumulative frequency percentage of the *Tertiary Entrance Score* (TES) of the candidate. The UAI is similar to the TER, except that notional scores are also calculated for the whole of the equivalent School Certificate (SC) cohort from two years previously. A candidate's UAI indicates the relative standing in the larger SC cohort and will be higher than the corresponding TER. The UAI is more comparable over time and from state to state in Australia than the TER was. Only candidates who present 10 or more units receive a UAI, although there is provision for a limited UAI, based on fewer than 10 units, to be awarded in certain circumstances. In 2000, 51188 candidates were eligible for a UAI. This represented 82.0% of the total candidature.

The marks used in the calculation of the UAI from the TES were rescaled by the University of Sydney. The scaled examination marks and the moderated assessment marks for each candidate as calculated by the Board were averaged and then put through a further scaling process that reshaped the distributions, producing a new mean for each course. The new distribution and mean for a course are dependent on the average performance in all courses taken by the candidates in that particular course.

In order to calculate the Universities Admissions Indexes the Tertiary Entrance Scores were first calculated, although these were not reported. The TES is a score out of 500, being the sum of the candidate's best 10 composite marks on a one unit basis. Marks for Board Endorsed courses are not included in the calculation of the TES.

From 1996 the 10 unit marks included in a candidate's TES have been selected in this order:

- The best unit mark in English;
- The best unit mark from Key Learning Area Group 1 (Mathematics, Science, Technological and Applied Studies);
- The best unit mark from KLA Group 2 (the remaining Key Learning Areas);
- The seven best unit marks from those remaining.

From 1997, the TER, and since then the UAI, are confidential, available only to candidates. UAI data are not available to the Board of Studies or to schools.

Higher School Certificate Examination 2000

Table 2 - Total Candidature by Universities Admissions Index Eligibility and Sex

Category	Number of Candidates	Percentage of Candidature	Number of Males	Number of Females	Male Percentage	Female Percentage
Eligible	51188	82.0%	23587	27601	46.1%	53.9%
Not Eligible	11227	18.0%	5594	5633	49.8%	50.2%
Total	62415	100.0%	29181	33234	46.8%	53.2%

A statistical report of the UAI scaling is prepared annually by the New South Wales Vice Chancellors' Conference Technical Committee on Scaling and may be purchased from the Universities Admissions Centre (UAC).

NAFLaSSL Courses

A *National Assessment Framework For Languages at Senior Secondary Level* (NAFLaSSL) has been developed for Australia-wide assessment and accreditation of languages other than English. Common national syllabuses are in place and the Board sets and marks the NAFLaSSL assessment tasks in several courses while others are set and marked interstate.

The NAFLaSSL marks of those candidates sitting for the NSW Higher School Certificate examination are then treated as raw examination marks and scaled in accordance with the Board's rules.

Gender Differences in HSC Courses

Table 8 shows gender differences in performance in HSC subjects and individual HSC courses. To avoid the instability of including differences that are based on a small number of students, only those courses having a total candidature of 200 or more, and having at least 60 students of the minority sex, were included in the table.

The differences are based on the composite mark comprising the average of the scaled examination mark and the moderated school assessment. This is the mark that is re-scaled by the universities and aggregated to form the Universities Admissions Index.

The difference shown is the *female mean minus the male mean*. Thus a positive difference indicates that females have performed better, while a negative difference indicates that males have performed better. To simplify the reporting so that differences from courses of different unit value could be compared, all differences are expressed as percentages.

Moderating School Assessment Marks

From 1992, the *raw assessment marks* provided by each school for students taking a course are given the same average as the scaled examination marks for that school group. The top assessments are then made equal to the top examination marks, after which curvilinear mapping is applied to the remaining marks. This may result in the relativities between the school's assessment marks being altered if their distribution shape is markedly different from that of the examination marks. However, the rank order is unchanged. Generally, the standard deviation of these *moderated assessment marks* will be different from that of the scaled examination marks.

Table 9, on the following pages, lists the means and standard deviations of the scaled examination marks and the moderated assessments for each course. For large candidatures these figures should be similar for each measure. The means and standard deviations shown are on a one-unit basis.

The correlation between the two measures is also shown for each course. The high correlation coefficients observed in large candidature courses imply that the scaled examination marks and the moderated assessment marks are comparable measures.

Further details about these scaling and assessment processes may be found in the following publications, which are available from the Board's offices:

- *HSC Scaling - An Explanation of the Facts and Procedures*
- *Higher School Certificate Assessments - General Guidelines*

Percentile Bands

The *percentile bands* provide an indication of a candidate's standing relative to other candidates presenting for the particular course. The percentile bands were determined on the basis of the combination of the examination mark and the assessment mark. Nine percentile bands were used, the top eight covering 10% each and the bottom one covering the remaining 20%.

Thus a candidate who received a band of:

- 91 - 100% was in the top 10% of the course candidature;
- 20% was in the bottom 20% of the course candidature.

Two percentile bands were reported in each 3 Unit course. The percentile band corresponding to the 'Common Paper' performance was a notional figure that indicated what the candidate's standing within the 2 Unit candidature would have been had he/she been a 2 Unit candidate. The second percentile band indicated the candidate's standing within the 3 Unit candidature based on performance in the 'Additional Paper' only.

A similar relationship existed between the percentile bands reported for the 4 Unit Mathematics and the 3 Unit Mathematics courses.

Separate percentile bands were reported for each of the 3 Unit and 4 Unit Science courses.

Where the number of candidates presenting a particular course was small (usually less than 100), percentile bands were not reported.

Table 10, on the following pages, lists the number and percentage of candidates in each percentile band as well as the band cutoff marks. The table includes courses with candidatures greater than 100. For courses with a single candidature, the percentage of candidates in each band will be close to 10% (20% for the bottom band).

Related courses have two candidatures, one taking only the Common course and the other taking both the Common and Additional courses. Candidates taking both courses are excluded from the scaling of the Common course so that 10% of those taking only the Common course will fall into each band (20% for the bottom band). The other candidates are then placed back into the distribution, resulting the percentage of candidates in each band being altered.

Additional courses are scaled to produce the same distribution as those candidates obtained on the Common paper. Generally there will not be 10% of candidates in each band for Additional courses.

Marking the Examination Scripts

Over a period of many years a procedure for marking the scripts has been developed to ensure that each candidate is treated as fairly as possible. Based on their knowledge of the subject and their experience, teachers from schools and universities are selected to carry out the marking according to carefully determined, detailed marking schemes. Some are appointed to more senior positions to control and check the marking process. They ensure that the marking schemes are applied accurately and consistently to all scripts. The application of this process, after the required weightings are applied to each section of the paper, results in a set of *raw examination marks*.

This set of marks places all candidates in each subject in an order of merit or a *rank order*, and indicates the relative magnitudes of the differences in performance of candidates in the examination. The marks are not a measure of achievement in an absolute sense. That is to say, a mark of 75% does not indicate that a candidate knows 75% of a given course; a mark of 10% does not indicate that a candidate has correctly answered only one-tenth of the examination paper.

Scaling of Raw Examination marks

For all courses, raw examination marks are converted to *scaled examination marks*. This was achieved using the following procedures although occasionally it is necessary to make minor final adjustments for statistical purposes.

For *large candidature 2 Unit courses*, taken by 200 or more 2 Unit candidates, the scaled examination mark is a mark out of 100, with the statewide median mark of the 2 Unit candidates set at 60 and with the distribution mapped to defined proportions. These proportions result in each course having a similar distribution of scaled examination marks.

Scaled examination marks for candidates taking a 3 Unit Additional paper are generally marks out of 50, set to reflect the performance of the 3 Unit candidature on the 2 Unit common paper. Similarly, the marks for 4 Unit candidates in Mathematics and Science are set to reflect the performance of the 4 Unit candidature on the paper they take in common with the 3 Unit candidates.

These scaled examination marks do not involve any scaling that is based on general ability across different subjects or courses.

This method of arriving at a scaled examination mark is appropriate for large 2 Unit candidatures, which tend to have relatively symmetrical distributions of raw examination marks. Different methods are employed for small candidatures because of the relatively unstable distributions from year to year.

For *small candidature 2 Unit courses*, taken by between 20 and 200 2 Unit candidates, scaled examination marks have been determined by setting the median mark at 60 but not mapping the distribution to closely defined proportions.

For *very small candidature 2 Unit courses*, taken by less than 20 candidates, no central mark is defined, the scaled examination marks being based on examiner judgements of the quality of performance of the highest and lowest-scoring candidates on a 100-mark scale.

The 2000 HSC raw examination marks were scaled according to the following constraints:

Two Unit Courses

For each 2 Unit course the raw examination mark distribution of the 2 Unit candidature was converted to an initial scaled examination mark distribution by a simple proportion that placed the marks on a scale of 0 to 100.

Large Candidature 2 Unit Courses - Candidatures Exceeding 200

The maximum final scaled mark for each course was set to reflect the expectation for an able, well-prepared candidate in that course. In most courses, this ranged from 95 to 100.

The minimum final scaled mark for each course was set to resemble the minimum raw mark on a 100-mark scale.

Other mapping points were inserted, if necessary, to meet the Board's requirements, from 1996, that:

- the median of the scaled marks would be 60
- approximately 1% of candidates would be awarded marks of 90 or more, (In general, when establishing the percentage of candidates above 90 marks, the mapping point that gave the percentage closest to, but not less than 1% was chosen. In subjects that do not have a 3 Unit Additional course approximately 2% of the students were given a mark of 90 or more.)
- approximately 25% of candidates would be awarded marks of 70 or more
- approximately 75% of candidates would be awarded marks of 50 or more
- approximately 5% of candidates would be awarded marks of less than 30.

Small Candidature 2 Unit Courses - Candidatures Between 20 and 200

The maximum final scaled mark for each course was set to reflect the expectation for an able, well-prepared candidate in that course.

The minimum final scaled mark was set to resemble the minimum raw mark on a 100-mark scale.

The median initial scaled mark was set to a final scaled mark of 60.

Care is also taken to ensure that no more than about 5% of candidates receive marks that are greater than 90 with a similar limit on those receiving a mark less than 30.

Very small candidature 2 Unit courses - Candidatures Less Than 20

The maximum final scaled mark for each course was set to reflect the expectation for an able, well-prepared candidate in that course.

The minimum final scaled mark was set to resemble the minimum raw mark on a 100-mark scale.

Three Unit Courses

Unless there were compelling reasons to the contrary, the distribution of final scaled marks on the 3 Unit additional paper was set to be the same as that of the scaled marks of the 3 Unit candidature on the 2/3 Unit common paper in that subject.

In the 3 Unit Science course, for which there was no 2/3 unit common paper, the median of the final scaled marks was set at 90 on a 150-mark scale. The mark levels corresponding to designated percentages of the candidature (as in large 2 Unit candidature courses) were then adjusted accordingly. For

example, approximately 1% of candidates were awarded marks of 135 or more.

Four Unit Courses

In Mathematics, the distribution of final scaled marks on the 4 Unit paper was set to be similar to that of the scaled marks of the 4 Unit candidature on the 3/4 Unit common paper in the subject. Variations to this principle occurred where considered necessary.

In Science, the distribution of marks was set to be similar to that of the scaled marks of the 4 Unit candidates on the 3/4 Unit Core paper.

A Guide to the Course Scaling Statistics

The following pages show, for each of the course candidatures in every subject presented at the Higher School Certificate, the various statistics relating to examination performance. The tables and graphs describe the decisions taken by the Examination Consultative and Executive Committee in conjunction with the various Examination Committees.

For *Single* and *Common* courses the histogram pairs show the relationship between the Initial (inverted) and Final (upright) distributions. The lines joining the histograms represent the mapping points used to produce the Final distribution by reshaping the Initial distribution. Since the Initial marks are derived from the Raw marks by a linear transformation, the Initial marks have the same distribution shape as the Raw marks.

For *Additional* courses, from 1996, the histogram pairs show the relationship between the Raw (inverted) and Final (upright) distributions. The Initial marks do not have the same distribution shape as the Raw marks for Additional courses because they reflect the relative performance of the Additional candidature on the Common paper. Consequently, the transformation from Raw to Initial marks is non-linear. The mapping points used to produce the Final distribution reshape the Initial distribution further.

For courses with fewer than 200 candidates the final distribution does not have to be within the close tolerances required for larger candidature courses. Grouped frequency distribution tables are not included for such courses.

Data are provided for three phases of the examination marks:

Raw Scores

These are the scores awarded by the examiners at the marking stage and are on the scales specified by the examination committees. The maximum possible mark for each course is shown in its table of statistics.

Initial Scaled Scores

These are the scores obtained after converting the marks in each 2 unit course onto a scale from 0 to 50 by a simple ratio transformation. The shape of the distribution of marks is not changed.

Final Scaled Scores

These are produced by the application of mapping points as listed at the bottom of each page. These mapping points are determined by the subject examination committees during deliberations with the Board of Studies' Consultative and Executive Committee.
